## project experience

### The Iron Yard SortaCloud

- Developed an application that connects cloud services together to form a single page to view all of your photos
- Used Bourbon/Neat/Bitters for styling
- Modal(FancyBox) and thumbnail sizing was done using jQuery
- Ruby on Rails is the framework used
- Employed the Facebook, Flickr and Dropbox API to get user photos
- Devise was used and customized for login
- Background processes request updated photo list using sidekiq/foreman, the requests are timed using clockwork
- Pull request was needed to update the Dropbox API

### Map Demo

- Developed an application that displays map locations with social login
- Bootstrap for styling navigation bar and login
- Leaflet.js was used for the map. Customized to show predetermined locations using; markers, outlines and popups
- Omniauth used for Github social login

### Additional work on Github and portfolio include

- Shreddr - Twitter clone allows you to follow users and create posts
- Teamemer - Group project that stores user uploaded memes
- Homework Tracker - Tracks past due, currently due and finished hw

## work history
